

# Leica DM500 Leica DM750

The New Generations Choice of Innovative Educational Microscopes

Living up to Life

## Made for Future Nobel Prize Winners

#### **Science Teaching Revitalized**

The more time the instructor has to teach, the more students can learn. The Leica DM500 and DM750 microscopes were specifically developed to revitalize science teaching and to achieve the goal of more hands-on time for Life science courses. With many student-friendly features and high-quality construction, the Leica DM500 and DM750 invigorate science learning and teach the next generation of scientists effectively and efficiently.

#### **Superb Optics**

- Based on the same optical platform as
   Leica Microsystems' research microscope line, students
   enjoy outstanding optical performance with full access
   to virtually all accessories from the Leica Microsystems
   microscope product line.
- NEW! 100x dry (no oil needed) objective provides very high resolution (N.A. 0.8) while eliminating the oil.

#### EZStore™

- Integrated vertical handle provides easy carrying and easy lifting when storing on high shelves; undercut on front of stand works in combination with the handle for safer, two-handed carrying.
- Integrated cord wrap eliminates damage to microscope components from improper cord wrapping; vertical cord insertion prevents the cord from pulling partially out of the stand while in storage or in use.
- The unique shape of the microscope stand protects controls from damage when microscopes are stored side-by-side.

#### EZGuide™

Student friendly slide holder to prevent slide chipping.

#### **EZLite**<sup>™</sup>

- LED illumination provides cool, white light with a lifetime of over 20 years average use. No longer need to change lamps during lab time and save the expense of replacement lamps.
- The cost-savings pays for several microscopes over their lifetimes.

#### SafeTStage™

- Microscope stage maintains its dimension, which eliminates the chance of injury from contact with a conventional stage rack.
- Rounded edges are easy on the skin.

#### AgTreat™

The spread of disease from surfaces is of great concern, especially in educational environments.
 Leica Microsystems has integrated an additive so that all microscope touchpoints are treated to inhibit the growth of bacteria. This helps to prevent the spread of disease via the microscope surfaces and leads to a healthier laboratory environment.

## DM500 – Science Teaching Made Easy

DM750 – Science Teaching for a New Generation

The Leica DM750 is designed specifically for the versatile needs of advanced Life Science courses as well as for professional training such as medical, veterinary, and dental schools.

#### Versatile possibilities

- Standard condenser for magnifications 4x – 100x
- Phase turret condenser for brightfield and phase contrast
- Flip top condenser for low magnifications
- The DM750 is available with a 4 position or 5 position nosepiece

#### Wear resistant

 Special stage finish offers additional protection from friction damage

#### **Energy saving**

 Patented time delay shutoff saves energy by automatically turning off the illumination after 2 hours of no use

#### A+ focus, contrast & illumination

- Weighted focus knobs provide inertia and extremely accurate focus capability
- Koehler field diaphragm available as an option for optimum illumination and contrast

#### Shared viewing made easy

- Variety of viewing tubes provide free rotation while securely fixed to the stand
- Standard viewing tubes with eyepiece locking screws to prevent loss of eyepieces

The ability to share, capture, and archive images is an important part of the microscopy laboratory. Now available: the full range of Leica Microsystems imaging solutions, including thew one-of-a-kind Leica ICC50 digital camera module.

#### Leica ICC50 Camera Module – Integrated and Modular

- Integrated: Fits between the microscope's viewing tube and stand for the best system integration and alignment.
- Modular: A stand-alone kit enables the user to capture images directly onto an SD memory card or to use the analog output for direct connection to a data projector.
- The camera's 3-megapixel CMOS sensor provides highresolution and fast live images.
- The USB output directly connects the Leica ICC50 camera to a computer and also provides power to the camera, which eliminates the need for an additional power supply.
- Includes Leica Application Suite (LAS) EZ software for easy camera control, image capture, annotation, measurement and documentation.
- Compatible with a wide selection of optional Leica Microsystems software modules.
- The modular design of the system allows easy upgrades and service.

A variety of trinocular viewing tubes and C-mount adapters provide the versatility to use stand-alone cameras; including the economical Leica EC3 digital camera, which opens the door to unlimited imaging possibilities

## A New Approach to Imaging

## Clean and Green

We actively implement ways to make our environment cleaner and safer for this generation and the next:

- All packaging is completely recyclable.
- No Lead content in any of the glass components.
- LED illumination consumes approximately 80% less energy than standard halogen illumination.
- The time delay shutoff feature found on the Leica DM750 ensures no energy is wasted.
- Constantly optimizing our logistics chain to keep the CO₂ footprint as low as possible.
- AgTreat<sup>™</sup> helps to prevent the spread of disease via the microscope surfaces and leads to a healthier laboratory environment.
- All products have been tested by independent safety laboratories and carry the cULus and CE mark to indicate their design for safety.
- All products are RoHs compliant, which means all electrical components meet any restrictions on the use of hazardous substances.

# "With the user, for the user" Leica Microsystems

Leica Microsystems operates globally in four divisions, where we rank with the market leaders.

#### • Life Science Division

The Leica Microsystems Life Science Division supports the imaging needs of the scientific community with advanced innovation and technical expertise for the visualization, measurement, and analysis of microstructures. Our strong focus on understanding scientific applications puts Leica Microsystems' customers at the leading edge of science.

#### Industry Division

The Leica Microsystems Industry Division's focus is to support customers' pursuit of the highest quality end result. Leica Microsystems provide the best and most innovative imaging systems to see, measure, and analyze the microstructures in routine and research industrial applications, materials science, quality control, forensic science investigation, and educational applications.

#### Biosystems Division

The Leica Microsystems Biosystems Division brings histopathology labs and researchers the highest-quality, most comprehensive product range. From patient to pathologist, the range includes the ideal product for each histology step and high-productivity workflow solutions for the entire lab. With complete histology systems featuring innovative automation and Novocastra™ reagents, Leica Microsystems creates better patient care through rapid turnaround, diagnostic confidence, and close customer collaboration.

#### Surgical Division

The Leica Microsystems Surgical Division's focus is to partner with and support surgeons and their care of patients with the highest-quality, most innovative surgical microscope technology today and into the future.

The statement by Ernst Leitz in 1907, "with the user, for the user," describes the fruitful collaboration with end users and driving force of innovation at Leica Microsystems. We have developed five brand values to live up to this tradition: Pioneering, High-end Quality, Team Spirit, Dedication to Science, and Continuous Improvement. For us, living up to these values means: Living up to Life.

#### and representatives in more than 100 countries

In accordance with the ISO 9001 certificate, Leica Microsystems (Switzerland) Ltd, Industry Division, has at its disposal a management system that meets the requirements of the international standard for quality management. In addition, production meets the requirements of the international standard ISO 14001 for environmental management.
